Umpqua National Forest; Finding of No Significant Environmental Impact of Treatment To Control Undesirable Species of Vegetation for the Purpose of Preparing Sites To Plant Trees

An Environmental Assessment that discusses vegetative management on the Steamboat Ranger District involving the control of competing vegetation on 283 acres of conifer plantations has been prepared. All proposed treatment areas are located on lands administered by the Umpqua National Forest within Lane and Douglas Counties, Oregon. The report is available for public review at the Steamboat Ranger District Office

and the Umpqua National Forest Office in Roseburg, Oregon.

This project involves aerial application of Velpar Weed Killer on 283 acres of forest lands in need of reforestation for the purpose of reducing moisture competition for planted trees. The Environmental Assessment does not indicate this is a major Federal action significantly affecting the quality of the human environment. Therefore, it has been determined that an environmental impact statement is not needed.

This determination was based upon consideration of the following factors which are discussed in detail in the Environmental Assessment: (a) the compound is approved by the Environmental Protection Agency for use; (b) there will be no irreversible or irretrievable loss of resources on the project area; (c) the physical and biological effects are limited to the project area; (d) no known threatened or endangered plants or animals have been recorded or observed within the project area.

Some public concern exists over the use of any chemical and the effects it has on water quality. The proposed project includes application measures designed to protect nontarget areas and the water quality. State and Federal water quality standards will be met.

No action will be taken prior to May 9, 1979.

The responsible official is R. D. Swartzlender, Forest Supervisor, Umpqua National Forest, P.O. Box 1008, Roseburg, Oregon 97470.

R. D. Swartzlender,
Forest Supervisor.
